VINTAGE EYE OF HORUS SYMBOLS

Here are some vintage photos showing the Eye of Horus (one eye showing). The Eye of Horus symbolizes the sun/satan/lucifer. The most famous example is seen on the back of the US dollar bill, floating over a pyramid.

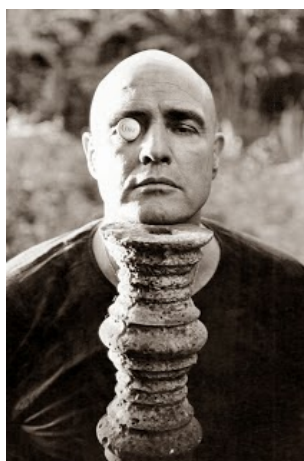

As you can see below, the main methods of showing the symbol in the past were by using an eyepatch or winking.

Obviously, any picture of a face can be cropped into an Eye of Horus. None of these photos or screen saves have been altered, they are all as they originally appeared.

What is the point of all this? To expose the cultural icons we foolishly worship as the pawns of evil they really are. The rest is up to you.

A few of them are unaware of the symbol's meaning, but not many.
